

Security Review of

Vesting Pool

April 2022

Vesting Pool / April 2022

Files in scope

Following solidity files:

<https://github.com/safe-global/safe-token/blob/cae032d014743c1357cc454ae7aa631bae8aeae8/contracts/VestingPool.sol>

Current status

All issues have been fixed by the developer. There are no known issues in the relevant contracts in <https://github.com/safe-global/safe-token/blob/a50728c28dd510ceae1b65bb526db98148a76f31/contracts/VestingPool.sol>

Issues

1. addVesting accepts vesting with account == address(0)

type: incorrect implementation / severity: minor

In `addVesting` function, it should be required that `account != address(0)` otherwise a malformed vesting will be created that increases `totalTokensInVesting` but can be neither claimed nor cancelled.

status - fixed

Issue has been fixed and is no longer present in

<https://github.com/safe-global/safe-token/blob/a50728c28dd510ceae1b65bb526db98148a76f31/contracts/VestingPool.sol>
